

## Save Time!

The DKT7 with TimeSaving Loudness Automation and Starfish 5.1

## DK Technologies introduces a disruptive option for its DK T7 Meter

Mixing engineers working on sound for picture are constantly looking for ways to save time and effort when mixing material that has to conform to a delivery or regulatory specification. Having to rewind to the head of a segment or waiting for an audio file to be analyzed wastes time and money.

DK Technologies has just released a unique solution to this problem. It's called the TimeSaver Automation Option for the T7 Loudness Measurement System, provides the ability to give an instant loudness score value for the whole session when changes are done anywhere in the middle.

Modes to fit Every Need: The T7 works the way you work with different operational modes:

- Post Production for audio with the length from 10 seconds to 3 minutes using the internal time clock.
- Post Production for audio with the length from 10 seconds to 1 hour using external SMPTE time code as the source.
- Broadcast Live production with a historical one hour time-line view with or without external SMPTE time code.

DK T7 marks another high point in Audio & Loudness Metering. Complete with all our well-known high precision metering tools as well as 3G SDI, 8 ch. AES I/O, Headphone out and more - **all included from the get-go** - the DK T7 has you covered for any possible application.
